

Project Design Phase-II

Auto Ticket Classification using Flow Designer

Date	28 September 2026
Team ID	SWTID-2026-4543
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	4 Marks

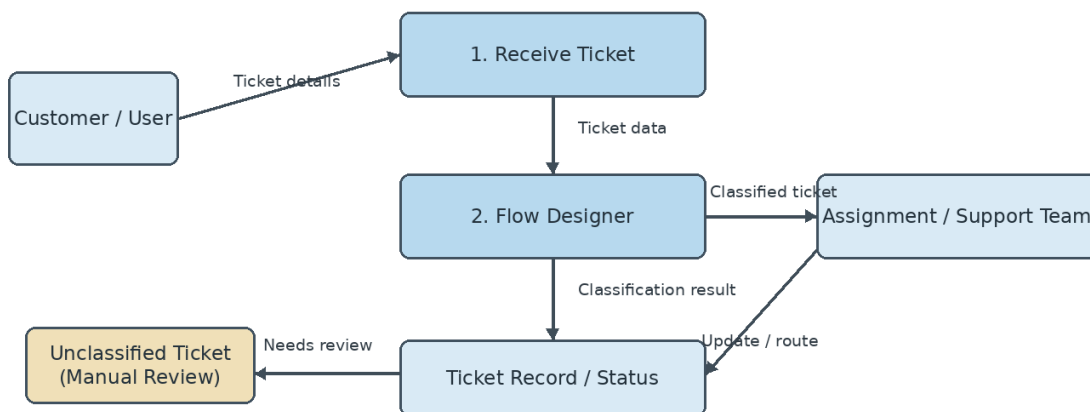

Data Flow Diagrams:

A Data Flow Diagram (DFD) is a traditional visual representation of the information flows within a system. A neat and clear DFD can depict the right amount of the system requirement graphically. It shows how data enters and leaves the system, what changes the information, and where data is stored.

For Auto Ticket Classification using Flow Designer, the DFD represents how ticket details enter the system, are processed through Flow Designer, classified, and then routed or sent for manual review.

Example: (Simplified)

DFD Level 0 - Auto Ticket Classification using Flow Designer

Example: DFD Level 0 (Auto Ticket Classification)

User Stories

Use the below template to list all the user stories for the product.

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
Customer / Ticket User	Ticket Submission	USN-1	As a user, I can create a support ticket by entering the required ticket details.	Ticket is created with the required information.	High	Sprint-1
	Ticket Submission	USN-2	As a user, I can provide a clear description of my issue or request.	Ticket contains a usable description for classification.	High	Sprint-1
	Ticket Status	USN-3	As a user, I can view the current status of my submitted ticket.	I can see the ticket status after processing.	Medium	Sprint-2
Support Agent	Automatic Classification	USN-4	As a support agent, I can have incoming tickets classified automatically using Flow Designer.	Ticket is assigned a defined classification based on its details.	High	Sprint-1
	Automatic Routing	USN-5	As a support agent, I can receive tickets routed according to their classification.	Classified ticket reaches the appropriate support team or workflow.	High	Sprint-1
	Manual Review	USN-6	As a support agent, I can review tickets that cannot be automatically classified.	Unclassified tickets are available for manual review.	Medium	Sprint-2

User Stories

Use the below template to list all the user stories for the product.

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
Flow Designer / System	Ticket Classification	USN-7	As a system, I can analyze the available ticket information using the defined Flow Designer conditions.	The flow evaluates the configured conditions.	High	Sprint-1
	Classification Rules	USN-8	As an administrator, I can define or update the conditions used for ticket classification.	Updated conditions are available to the flow.	High	Sprint-2
	Workflow Action	USN-9	As a system, I can continue the appropriate workflow after a ticket is classified.	The next configured flow action is triggered.	High	Sprint-2
Administrator	Flow Monitoring	USN-10	As an administrator, I can monitor the classification flow and its results.	Flow executions and classification results can be reviewed.	Medium	Sprint-2
	Exception Handling	USN-11	As an administrator, I can identify tickets that do not match the classification conditions.	Unmatched tickets are identified for manual handling.	Medium	Sprint-2
Support Agent	Classification Review	USN-12	As a support agent, I can review and correct an automatically classified ticket when required.	The ticket classification can be reviewed before further processing.	Medium	Sprint-2

User Types:

- Customer / Ticket User
- Support Agent
- Administrator
- Flow Designer / System
