

Project Design Phase-II

Solution Requirements (Functional & Non-functional)

Date: 28 September 2026

Team ID: SWTID-2026-4543

Project Name: Auto Ticket Classification using Flow Designer

Maximum Marks: 4 Marks

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Ticket Submission	Users can create support tickets through the service portal or an approved intake form.
		Capture required details such as short description, detailed description, category, priority, and requester.
FR-2	Automatic Ticket Classification	Flow Designer triggers when a new ticket is created or its description is updated.
		Classify the ticket using configured rules or classification logic based on its description and selected fields.
		Set the appropriate ticket category and subcategory automatically.
FR-3	Assignment and Routing	Route the classified ticket to the corresponding support group based on classification rules.
		Set or recommend an assignment group and, where configured, an assigned agent.
FR-4	Review and Exception Handling	Allow an agent to review and correct the automatically assigned category or group.
		Send tickets with missing, ambiguous, or unmatched details to a designated review queue.
FR-5	Status and Notifications	Update the ticket with classification and routing results while preserving its audit history.
		Notify the requester or support team when configured workflow events occur.

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

NFR No.	Non-Functional Requirement	Description
NFR-1	Usability	The ticket form and agent review process should be clear and easy to use.
NFR-2	Security	Only authorized users and roles can view, update, classify, or reassign tickets.
NFR-3	Reliability	Workflow execution should handle failures safely and avoid duplicate or inconsistent updates.
NFR-4	Performance	Classification and routing should complete within an acceptable response time for normal ticket

		volumes.
NFR-5	Availability	Ticket intake and automated classification should be available according to the service platform's operational availability.
NFR-6	Scalability	The solution should support growth in ticket volume, categories, and support groups without major redesign.
