

Auto Ticket Classification Using Flow Designer

1. INTRODUCTION

1.1 Project Overview

Auto Ticket Classification Using Flow Designer is an automated ticket management system that classifies incoming support tickets into appropriate categories without manual intervention. The system uses predefined rules and workflows in Flow Designer to analyze ticket details and assign them to the correct category, improving efficiency and reducing response time.

1.2 Purpose

The purpose of this project is to automate the ticket classification process, reduce human effort, improve accuracy, and ensure that tickets are routed to the appropriate support teams quickly.

2. IDEATION PHASE

2.1 Problem Statement

In many organizations, support tickets are classified manually, which consumes time and may lead to errors. An automated classification system is needed to improve ticket handling and service quality.

2.2 Empathy Map Canvas

Think

- ↯ Need quick ticket resolution.
- ↯ Want accurate ticket categorization.

Feel

- ↯ Frustrated by delayed responses.
- ↯ Satisfied with fast service.

Say

- ↯ "My issue should be resolved quickly."

Do

- ↯ Create and submit support tickets.

2.3 Brainstorming

- ✎ Automatic ticket categorization.
 - ✎ Workflow automation using Flow Designer.
 - ✎ Faster ticket routing.
 - ✎ Reduced manual effort.
 - ✎ Improved service management.
-

3. REQUIREMENT ANALYSIS

3.1 Customer Journey Map

1. User creates a ticket.
2. Ticket details are submitted.
3. Flow Designer analyzes ticket information.
4. Ticket is automatically classified.
5. Ticket is assigned to the relevant team.
6. Team resolves the issue.
7. User receives updates and resolution.

3.2 Solution Requirement

Functional Requirements

- ✎ Ticket creation.
- ✎ Automatic classification.
- ✎ Team assignment.
- ✎ Status tracking.
- ✎ Notification system.

Non-Functional Requirements

- ✎ Reliability.
- ✎ Security.
- ✎ Scalability.
- ✎ Performance.

3.3 Data Flow Diagram

User → Create Ticket → Flow Designer → Classify Ticket → Assign Team → Resolution → User

3.4 Technology Stack

- Platform: ServiceNow
 - Tool: Flow Designer
 - Database: ServiceNow Database
 - Language: JavaScript (if required)
 - Browser: Chrome/Edge
-

4. PROJECT DESIGN

4.1 Problem Solution Fit

The proposed solution eliminates manual classification and ensures tickets reach the correct support team automatically.

4.2 Proposed Solution

The system uses Flow Designer to examine ticket information such as category, keywords, and descriptions. Based on predefined conditions, tickets are classified and assigned automatically.

4.3 Solution Architecture

User → ServiceNow Portal → Flow Designer → Classification Rules → Assignment Group → Resolution

5. PROJECT PLANNING & SCHEDULING

5.1 Project Planning

Phase	Activity
Planning	Requirement Gathering
Design	Workflow Design
Development	Flow Creation
Testing	Validation

Phase	Activity
Deployment	Implementation
Maintenance	Monitoring

6. FUNCTIONAL AND PERFORMANCE TESTING

6.1 Performance Testing

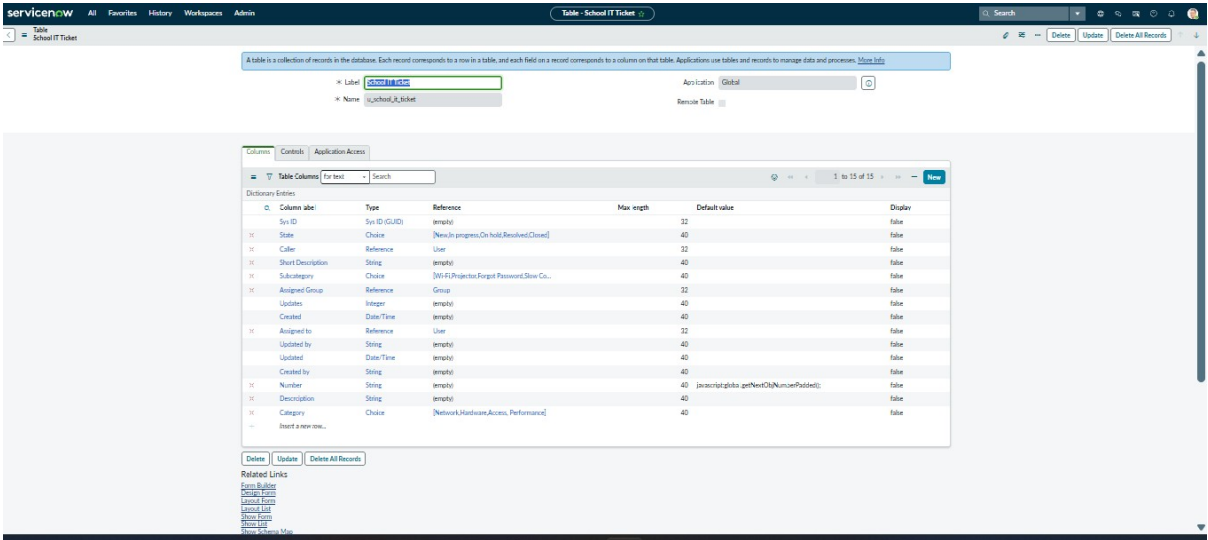

Test Case	Expected Result
Create Ticket	Ticket Created Successfully
Classify Ticket	Correct Category Assigned
Assign Team	Correct Team Assigned
Notification	User Receives Notification

7. RESULTS

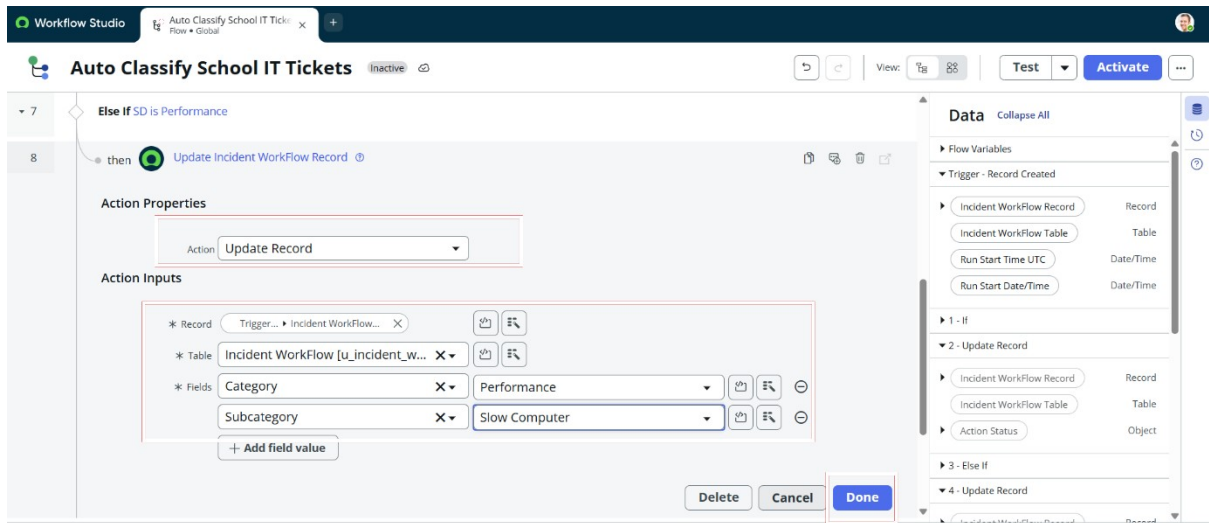

7.1 Output Screenshots

Insert screenshots of:

- Ticket Creation Form

- Flow Designer Workflow

3. Ticket Classification Result

Incident WorkFlow INC00511

Number: INC00511

Caller: Alfonso Grigien

Category: Network

Subcategory: Wi-Fi

Short description: My college Has issue with Network

Description:

State: -- None --

Assigned group:

Assigned to:

Update Delete

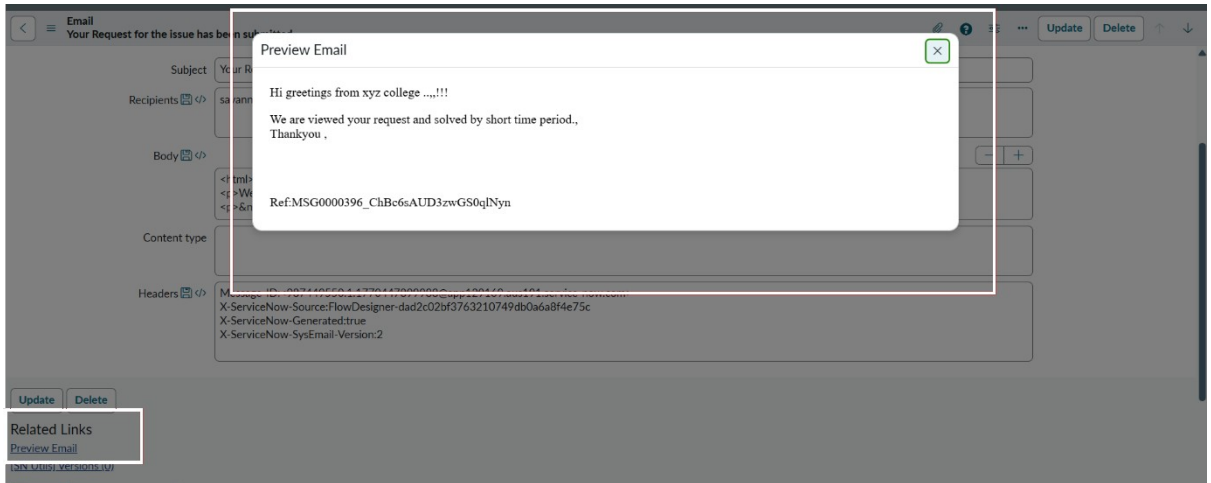

4. Assignment Group Result

Workflow Studio interface for 'Auto Classify School IT Tickets'. The workflow is currently inactive. Step 6 is 'Update Incident WorkFlow Record'. The action properties show 'Update Record' as the action. The action inputs are configured as follows:

- Record: Trigger... Incident WorkFlow...
- Table: Incident WorkFlow [u_incident_w...]
- Fields:
 - Category: Access
 - Subcategory: Forgot Password

The 'Done' button is highlighted in blue.

5. Ticket Resolution Screen

8. ADVANTAGES & DISADVANTAGES

Advantages

- Reduces manual work.
- Faster ticket processing.
- Improved accuracy.
- Better customer satisfaction.
- Easy monitoring.

Disadvantages

- Initial setup effort.
- Depends on predefined rules.
- Requires maintenance for new ticket types.

9. CONCLUSION

The Auto Ticket Classification Using Flow Designer project successfully automates ticket categorization and assignment. It improves efficiency, reduces response time, and enhances service management performance.

10. FUTURE SCOPE

- AI-based ticket classification.
- Machine learning integration.

- ↗ Advanced analytics and reporting.
 - ↗ Multi-language ticket processing.
 - ↗ Predictive issue management.
-
